Education

Institute of Engineering and Technology, DAVV
Bachelor of Engineering

Oct 2021 – June 2025
Indore, M.P.

Relevant Coursework

- Data Structures
- Algorithms
- Computer Networks
- Artificial Intelligence
- Java OOPs
- DBMS and SQL
- Operating Systems

Technical Skills

Languages: C++, Python, Java, HTML, CSS, JavaScript, TypeScript, SQL, GraphQL

Technologies: React Native, React, Express.js, Next.js, Node.js, Docker, Figma

Tools: Git, GitHub, Postman, Expo

Databases: MongoDB, Redis, PostgreSQL

Experience

Cognizant Technology Solutions

Feb 2025 – Present

Programmer Analyst Trainee

Bengaluru, Karnataka

- Built a full-stack internal automation platform using Next.js (React) and Spring Boot, consolidating multiple operational scripts into a centralized dashboard adopted across multiple project teams.
- Developed and integrated Node.js automation scripts with a Spring Boot backend, exposing RESTful APIs consumed by a React frontend while implementing end-to-end request handling and backend services.
- Automated browser-based operational workflows using JavaScript, reducing repetitive manual effort by approximately 90% and transforming reusable automation logic into backend services.
- Designed modular automation components and comprehensive technical documentation, enabling extensibility, maintainability, and seamless onboarding for future automation use cases.

Vigility Technologies

Jan 2025 – Mar 2025

Frontend Developer Intern

Indore, M.P.

- Built a React.js-based frontend for a reporting platform where users can run SQL queries and generate custom reports, integrated with a FastAPI backend and SQL database.
- Integrated TanStack Router for dynamic, client-side routing, reducing perceived navigation delay by 30% during test runs and followed Agile methodology with sprint planning, daily standups, and retrospectives to maintain consistent development velocity.
- Implemented dynamic SQL result visualization and structured report generation, using Tailwind CSS and modern React patterns to deliver a clean, responsive, and accessible UI for streamlined data exploration.

Projects

MicroScroll - Revise concepts quickly | *React, Node.js, Supabase(Auth and DB), Express.js, PostgreSQL.* ([Link](#))

- Built an end-to-end AI-powered microlearning platform using React, TypeScript, Vite, and Tailwind, enabling users to convert PDFs/DOCX/PPTX into interactive study decks with semantic chunking and automated card generation.
- Designed and implemented a scalable content processing pipeline, achieving sub-500ms card generation and 60fps study feed performance.
- Developed an Instagram-style snap-scrolling study feed with gesture controls, active recall (ghost words), and ELI5 mode, improving user engagement and retention.
- Integrated spaced repetition (SM-2), streak tracking, and mastery analytics using IndexedDB + Node.js APIs, enabling personalized learning paths and cross-device persistence.

OneMinuteLabs | *React, Node.js, Express.js, MongoDB* ([Link](#))

- Developed a full-stack web platform featuring 10+ interactive coding challenges (terminal commands, REST APIs, debugging, security) with real-time validation and instant feedback mechanisms.
- Architected scalable backend services with modular game logic, dynamic leaderboards, and streak progression systems using MongoDB aggregation pipelines and Express.js middleware.
- Optimized API response times by 38% through strategic Redis caching implementation and MongoDB query optimization for sub-100ms real-time gameplay performance.

Achievements

LeetCode: 550+ questions solved, Max Rating 1558 ([Link](#))

Codeforces: 75+ questions solved, Max Rating 1121 ([Link](#))

CodeChef: 2-Star, Max Rating 1420 ([Link](#))
