

M SAI KUSHITH

Full-Stack Developer · AI/ML

Bengaluru, India | +91-7842732706 | msaikushith718@gmail.com | [LinkedIn](#) | [Github](#)

SUMMARY

Full-stack developer with production experience building and shipping applied AI systems end to end. Built NAL, a real estate platform combining a Three.js 3D property explorer with voice interaction (STT/TTS), a Leaflet.js/Google Earth Engine geospatial module, and a OCR document-verification pipeline (Tesseract + Nvidia NIM LLM) running at 95% extraction accuracy. Also built Partyoria, an event-management platform with an automated vendor budget allocation engine. Comfortable owning a feature from React/TypeScript frontend through Django/FastAPI backend to the ML or LLM component that powers it. Two-time internal award winner for product and technical impact.

SKILLS

Frontend: React, TypeScript, Three.js, Leaflet.js

Backend: Python, Django, FastAPI, PostgreSQL, SQL, REST APIs, Java, Hibernate, JDBC, J2EE

AI / ML: Machine Learning, Generative AI, RAG, Prompt Engineering, Nvidia NIM, Tesseract OCR, Google Earth Engine, LangChain, LangGraph, Vector DB

Tools/OS: Git, Linux, Jitsi, VS Code, PyCharm

EXPERIENCE

Software Developer

AlstonAir Technologies | Sep 2025 – July 2026 | Bengaluru, India

NAL — New Age Land (Real Estate Intelligence Platform)

- Built a OCR document verification pipeline (Tesseract + Nvidia NIM LLM) with Kannada-language support, validated against the platform database at 95% extraction accuracy.
- Developed a geospatial intelligence module using Leaflet.js and Google Earth Engine, displaying 10-year satellite history, survey numbers, and Kaveri portal land records in real time.
- Built a Three.js 3D property assistant with STT/TTS APIs, enabling fully voice-driven property search and exploration.
- Integrated Jitsi for virtual property site visits with complete booking and session management via Django REST APIs.

Partyoria (Event Management Platform)

- Engineered an event creation system supporting 13 categories and 134+ event types using database-driven input fields; built the full customer dashboard and vendor management views.
- Built an automated budget allocation engine that calculates and assigns vendor budgets based on user event requirements.

PROJECTS

Cancer Disease Detection — Python, Scikit-Learn, ML

- Built ML classification models on genomic datasets with feature engineering and model optimization for cancer detection.

PDF Document Analysis System — Python, NLP, ML

- Built an automated pipeline for keyword extraction and text analysis from PDF documents using NLP.

EDUCATION

B.Tech, Computer Science & Engineering

Sreenivasa Institute of Technology and Management Studies | Aug 2021 – May 2025 | Chittoor, AP

ACHIEVEMENTS

- AI Innovation Champion — awarded by AlstonAir Technologies for applied AI contributions across production systems.
- People's Choice Award — voted by peers at AlstonAir Technologies for product impact on the Partyoria platform.
