

KRISHAN KANT

Bengaluru, Karnataka | +91-6204142591 | krishankantptu@gmail.com | [LinkedIn](#) | [LeetCode](#) | [GitHub](#)

PROFESSIONAL SUMMARY

AI & fullstack engineer focused Software Engineer with **6 months of hands-on internship experience** architecting distributed **microservices** from the ground up, delivering a highly scalable **12+ service** ecosystem — including a high-throughput **API gateway**, event-driven notification **pipelines**, geolocation/search infrastructure, and secure FinTech payment integrations for a live quick-commerce startup. Deeply skilled in **Java/Spring Boot**, **Kafka**, **Redis**, and **PostgreSQL/MongoDB** at scale, with hands-on expertise extending into practical GenAI integration (**Spring AI**, **OpenAI**). Backed by a **strong DSA foundation (LeetCode Knight, top 3% globally)**, consistently engineering reliable, **production-grade** backend systems.).

TECHNICAL SKILLS

Backend & System Design: Java, Spring Boot, Spring Data JPA, Spring Security, Microservices Architecture, REST APIs, Kafka (event-driven design), Redis (caching), Docker, System Design (HLD/LLD), OS, DBMS, Computer Networks, OOPs, Software engineering

AI / GenAI Integration: Spring AI, OpenAI API integration, LLM, async processing for AI workloads (working knowledge of RAG, vector search, LangChain concepts, intelligent automation.)

Languages: Java, Python, SQL, C++

Databases & Tools: PostgreSQL, MongoDB, Redis, Kafka, Git, GitHub, Maven, Postman, Swagger

APIs & Integrations: JWT Authentication, Razorpay Payment Gateway, Webhooks

EXPERIENCE

Coderoxygen Pvt. Ltd.

Software Developer Intern

Jan 2026 – May 2026

Greater Noida, India

- **Architected a Distributed Microservices Infrastructure:** Designed and engineered a highly scalable ecosystem using Spring Boot and Java across **12+** autonomous services, building the platform from the ground up, improving system fault tolerance by **40%** and eliminating single points of failure by isolating core domain tasks..
- **Designed a High-Throughput API Gateway:** Implemented a centralized **api-gateway** to manage routing logic and cross-cutting concerns, reducing client-to-service round-trip latencies by **25%** through optimized downstream request routing.
- **Engineered Custom Shared Infrastructure Components:** Developed a reusable logging-starter library as a custom Spring Boot starter to standardize distributed tracing, cutting debugging and root-cause analysis time by **35%** across all running instances.
- **Optimized Distributed Database Management:** Structured localized **PostgreSQL** schemas and replaced inefficient legacy dashboard logic with optimized **JPQL queries**, driving a **50% improvement** in query performance for dynamic business and order metrics.
- **Implemented Asynchronous Event-Driven Notifications:** Built a decoupled notification-service to process updates asynchronously, reducing main-thread blocking time by **30% during** high-concurrency order placement windows.
- **Built Secure FinTech Integration Capabilities:** Designed the backend state machine within payment-service and authored integration documentation, decreasing transaction failure rates by **18%** through rigorous edge-case and state-validation checks.
- **Engineered Geolocation & Search Architecture:** Developed dedicated location-service and search-service modules optimized for spatial query isolation, achieving a **20% speedup** in real-time delivery matching and location-based inventory lookups.
- **Stack:** *Java, Spring Boot, React, JavaScript, PostgreSQL, MongoDB, Microservices, REST APIs, Git.*

PROJECTS

AI-Powered Resume Screener [\[GitHub\]](#) | *Java, Spring Boot, MongoDB, Spring AI, OpenAI, Maven, Docker, Swagger, JUnit*

- Built a **Java 17 / Spring Boot 3.3** backend integrating the OpenAI API via Spring AI to automate recruiter resume screening; designed an asynchronous (**@Async**) pipeline processing bulk **PDF/DOCX** uploads with instant **202 Accepted** responses.
- Designed endpoints for job creation, **LLM-ranked** candidate retrieval, and reporting with strict **HTTP handling**; containerized **MongoDB** via **Docker** Compose with dynamic environment/**API-key** configuration.

Krikapay [\[GitHub\]](#) | *Spring Boot, React, PostgreSQL, JWT, Razorpay, Docker*

- Architected a production-ready digital wallet platform (**Spring Boot 3/Java 21, React/TypeScript, Kotlin**) containerized via **Docker** with **PostgreSQL** and integrated Prometheus metrics.
- Implemented secure **JWT rotation**, **TOTP 2FA**, and a responsive dashboard supporting **P2P** transfers, **KYC** workflows, and **Razorpay** checkout with strict rate limiting.

EDUCATION

IK Gujral Punjab Technical University

Bachelor of Technology in Computer Science and Engg. (**CGPA: 7.33**)

Sep 2023 – jun 2026

Jalandhar, India

Shaheed Bhagat Singh State University

Diploma in Computer Science and Engg. (**76.9%**)

Aug 2020 – May 2023

Firozpur, India

ACHIEVEMENTS

- Achieved **Knight Badge** on LeetCode with a peak rating of 2006 (**Top 3%** globally) and **800+** problems solved.
- Secured **2nd** position in State Level Hackathon at NIT Jalandhar.
- Secured **2nd** position in State Level Hackathon at GNA University.
- Secured **5th** position in PSBs State Level Hackathon among **200+** teams.
