PROFESSIONAL SUMMARY

Backend Developer with 2+ years of experience building scalable backend systems, analytics platforms, and AI-powered enterprise applications using **Python (Django/FastAPI)** and **Java**. Experienced in semantic search, multi-tenant architectures, asynchronous processing, and large-scale analytics using **ClickHouse**, **Neo4j**, **Milvus**, **Kafka**, and **LangGraph**.

EXPERIENCE

Software Developer

November 2025 – Present

Stagu Technologies

Gurgaon, India

- Implemented **multi-tenant** capabilities in an existing law-enforcement platform by adding **organization-level filtering** and **role-based access controls** to support secure deployment across multiple agencies.
- Engineered tool-augmented AI agents using **LangGraph** to automate intelligence gathering. Integrated generic SQL tools for natural language interactions over telecom records and structured entity queries via OpenSearch.
- Enhanced an existing document-processing pipeline by improving **entity extraction** accuracy and adding **crime classification** capabilities for legal evidence analysis.
- Improved semantic search reliability by fixing chunking-limit issues in **Milvus** ingestion pipelines and enhancing retrieval quality with reranking and query-suggestion generation.
- Designed a large-scale **analytical system** computing suspect vectors across **100+ million records** from 2 sources. Leveraged **ClickHouse** with concurrent execution for low-latency, high-performance analytics.
- Developed network intelligence capabilities for the **Indian Cyber Crime Coordination Centre (I4C)** using **Neo4j graph** database to analyze complex suspect linkages. Built RESTful APIs (Django/FastAPI) to visualize **top analytical vectors and geospatial data** on real-time dashboards.

Analyst/Software Engineer

June 2024 – November 2025

Capgemini

Bangalore, India

- Developed and deployed **Spring Boot** REST APIs for Customer Onboarding (KYC, AML, Document Verification), reducing onboarding latency by 30% and enabling smoother compliance workflows.
- Integrated **Kafka**-based asynchronous workflows to process compliance checks reliably under peak traffic.
- Implemented idempotency keys and audit tracking mechanisms to improve transaction reliability and support compliance requirements.

Backend Developer Intern

March 2022 – August 2022

IQVIA

Remote, India

- Developed **Flask** APIs and a **MongoDB** backend for a medical application, deploying to AWS and ensuring enterprise reliability with 500+ PyTest unit tests.
- Engineered Apache **Airflow DAGs** to automate MongoDB-to-S3 backups, improving disaster recovery workflows and boosting data security compliance by 50%.

PROJECTS

SMILE | *Django, React, PostgreSQL, Docker, Nginx*

November 2023 – April 2024

- Designed a full-stack platform using **ReactJS** and **Django**, optimizing a **PostgreSQL** database to manage 2,000+ active donors and seamlessly serve 10-15 patients daily.
- Automated infrastructure deployment utilizing **Docker**, **Nginx**, and GitHub CI/CD pipelines to ensure zero-downtime updates and reliable system performance.

TECHNICAL SKILLS

Languages: Python, Java, C++, SQL

Backend: Django, FastAPI, Spring Boot, Flask, RESTful APIs, Microservices

AI Engineering: LangGraph, LangChain, RAG, Semantic Search

Databases: MySQL, PostgreSQL, ClickHouse, Milvus, Neo4j, MongoDB, OpenSearch, Redis

Cloud & DevOps: AWS, Docker, NGINX, GitHub Actions (CI/CD), Git

EDUCATION

Jorhat Engineering College

Assam, India

Bachelor of Technology in Computer Science and Engineering

August 2019 – July 2023
