EDUCATION

- **National Institute of Technology, Andhra Pradesh (NIT)** AP, India
Bachelor of Technology 2019 - 2023

SKILLS SUMMARY

- **Languages:** Python, C++, JavaScript, SQL
- **Frameworks & Backend:** FastAPI, Flask, REST APIs, Microservices Architecture, LangChain, LlamaIndex, Langgraph, Streamlit
- **AI/ML & LLMs:** OpenAI API, GPT-4, Hugging Face Transformers, Ollama, Prompt Engineering, Conversational AI, RAG, Vector Databases (Weaviate, ChromaDB), Agentic AI, Autonomous Agents.
- **Database:** MySQL, SQLite, Firebase .
- **Cloud & Deployment:** Git, Docker, AWS, Postman
- **Python Core & Tooling:** Asyncio, pytest, Pandas, NumPy, Anaconda

EXPERIENCE

- **Coding Nebula, Software developer** Jan 2025 - May 2026
 - Built an AI-powered invoice analysis platform using Python, Flask, OCR, RAG, and Weaviate, enabling semantic retrieval and conversational querying across PDF and image invoices with Ollama and Hugging Face models.
 - Implemented embedding caching to reduce repeated document processing by 50%, and built secure RESTful APIs with Firebase authentication and persistent chat history, improving overall query response latency.
 - Built an AI system that generates website templates from text prompts, using RAG (LangChain, LlamaIndex, Qwen3-Embedding-0.6B) for context-aware retrieval and asynchronous Flask APIs for real-time generation.
 - Built a conversational AI system for a chemical company by fine-tuning Qwen 30B (GGUF) on domain-specific datasets, enabling accurate and context-aware chemical information retrieval.
 - Designed and deployed a fully offline Android Conversational AI chatbot for 10th-grade NCERT textbooks using Google Edge AI, leveraging on-device LLM inference, local embedding models to ensure fast, privacy-preserving educational QA
- **Callvcal, Software Developer Intern** May 2023 - July 2023
 - Built the front end and UI/ UX of the website from scratch. Implemented a web scraping tool and developed an Excel System to store the data generated by the crawler.
 - The functionality of the web app is to crawl the data of the EDG websites and store them in the excel sheet to send it to the frontend of the web app and then analyze Interactive Text, visualize it.
 - Used terms like Date, Headline, Topic, Content as the key words for the web crawler to identify the URLs related to Articles.
 - Tech Stack: Python, Flask, Beautiful Soup, HTML/CSS, JavaScript.

PROJECTS

AI-Powered Healthcare Interaction Management System | *FastAPI, LangGraph, Groq LLM*

- Developed an AI-powered healthcare interaction management system enabling field representatives to manage HCP interactions through structured forms and a conversational AI assistant.
- Built a LangGraph-based AI agent with tool calling to automate interaction logging, editing, follow-up scheduling, material search, and inventory-aware sample distribution using natural language.
- Integrated Groq LLM with FastAPI to process conversational inputs, execute multi-step AI workflows, and automate CRM interaction management.

ONLINE CODING PROFILES
