SUMMARY

Pre-final year CS (AIML & IoT) student with hands-on experience across full-stack development, machine learning, generative AI, and data analytics – from REST APIs and React frontends to NLP pipelines and computer vision models, comfortable picking up new stacks quickly across the full development cycle.

EDUCATION

GLA University, B.Tech in Computer Science & Engineering (AIML & IoT), CGPA: 8.28 Expected Jun 2027

Champa Agrawal Inter College, PCM Intermediate, Percentage: 87% Apr 2023

INTERNSHIP EXPERIENCE

Deloitte Remote (Virtual) | Jun 2025 – Jul 2025

Data Analytics Intern

- Wrote SQL queries and Excel-based data validation routines on structured business datasets, catching anomalies that reduced manual review effort noticeably.
- Pulled trends from large datasets and put together clear summaries for stakeholders, turning raw numbers into something actually readable and useful.

Micro IT Services

Work From Home | May 2025 – Jun 2025

AI/ML Intern

- Trained and compared ML classification models in Python, handling feature engineering and data preprocessing from scratch to get usable accuracy out of messy inputs.
- Built text processing pipelines and charted model performance using Matplotlib and Seaborn to make evaluation results easy to interpret.

PROJECTS

AI-Powered Resume Screening & Job Matching System Sep 2025 – Nov 2025

Python, BERT, NLP, LangChain, ReactJS, Django REST API, PostgreSQL

- Built an end-to-end resume screening tool using BERT embeddings and NLP for semantic matching, hitting **96% accuracy**; the Django REST backend handles concurrent sessions statelessly, with a ReactJS recruiter dashboard on top.
- Designed the ranking engine using a **min-heap priority queue** ($O(k \log n)$) for top-k candidate selection, with thread-safe score aggregation and live result updates on the frontend.

Deepfake Detection System (Multimodal & Explainable AI) Jan 2026 – May 2026

Python, FastAPI, OpenCV, Vision Transformer (ViT), LangGraph, Next.js

- Put together a multimodal deepfake detector using Vision Transformer (ViT) and OpenCV that reached **92% detection accuracy**; the FastAPI backend runs async with a thread-safe inference pipeline so multiple media files can be analyzed at once.
- Wired up a Next.js frontend with an optimized inference flow to keep detection results snappy, and used LangGraph to orchestrate the multi-step analysis pipeline.

SKILLS

Languages: Python, Java, C++, JavaScript, TypeScript, SQL, HTML, CSS

CS Fundamentals: Data Structures, Algorithms, OOP, Distributed Systems, Concurrency, Multi-threading, Software Design, REST API Design

AI / ML & GenAI: Machine Learning, Deep Learning, NLP, LLMs, Generative AI, RAG, Agentic AI, LangChain, LangGraph, Prompt Engineering

Frameworks & Libraries: TensorFlow, Scikit-Learn, Hugging Face, FastAPI, Django REST, Node.js, ReactJS, Next.js

Data & Cloud: SQL, PostgreSQL, MongoDB, Excel, Data Visualization, AWS, Git, GitHub, CI/CD

CERTIFICATIONS

- Fabric Data Engineer Associate (DP-700) **Microsoft Certified**, 2026
- Oracle Cloud Infrastructure 2025 Certified Generative AI Professional **Oracle**, 2025
- Gemini Certified Student **Google**, 2025

ACHIEVEMENTS & ACTIVITIES

1st Place – Hack-D-PY Python Hackathon Apr 2024

CS Engineering & Application Dept., GLA University

Team Lead – Smart India Hackathon (Internal Round)

Participated in 10+ hackathons with consistent Top-8 rankings

Sep 2023 & Aug 2024
