

HARSHA A

RESUME SUMMARY

Dedicated and fast-learning Computer Science graduate with strong knowledge of Java programming, Python, database management systems, and web technologies. Experienced in developing full-stack academic projects and implementing machine learning models for predictive analysis. Adept at problem solving, debugging, and learning new technologies quickly.

PERSONAL DETAILS

Current Location Bengaluru
Date of Birth August 26, 2003
Male

EDUCATION

Graduation		
Course	B.Tech/B.E. (Computer Science and Engineering)	
College	S J B Institute of Technology, Bangalore (2025)	
Score	7.55 CGPA	
Schooling	Class XII	Class X
Board Name	Karnataka	CBSE
Medium	English	English
Year of Passing	2021	2019
Score	83.33%	75.6%

WORK EXPERIENCE

GPTCS | Feb 2026 - July 2026

-Participated in requirements gathering, system design discussions, and technical documentation for an AI-based attendance platform to automate student attendance using CCTV-based face recognition.

- Developed backend services using Python FastAPI and PostgreSQL to manage school entities including students, classes, parents, and camera configurations with role-based access control (RBAC).
- Built a computer vision pipeline integrating YOLOv8-Face for multi-face detection and InsightFace (ArcFace) for facial recognition, enabling real-time identification of students from CCTV streams.
- Implemented face embedding storage and similarity matching using PostgreSQL (pgvector) and developed APIs to process attendance events, validate attendance time windows, deduplicate recognitions, and generate automated attendance reports.

INTERNSHIPS

Mindstack Solutions Pvt. Ltd. | September 2024 - January 2025

- Worked on a PACS (Picture Archiving and Communication System) to manage and retrieve medical imaging studies from DICOM servers.
- Implemented DICOM C-FIND queries to retrieve study metadata and support efficient search of radiology imaging records.
- Developed search and filtering features based on patient details, modality, and study date to improve navigation across imaging datasets.
- Integrated DICOM Query/Retrieve services (C-MOVE, C-GET) to enable secure retrieval of imaging studies from remote PACS servers.

Varcons Technologies Pvt. Ltd. | October 2023 - December 2023

- Completed my internship as a full-stack web developer intern for a month. We worked on a project title Template for the LLP site. This project aimed to create fully functional web templates for a company client. As part of the project, I designed functional web pages, utilizing the database to collect, store, and sort data according to the design briefs and client specifications provided in the project proposal.

PROJECTS

Skin Cancer Detection using Deep Learning | November 2024 - February 2025

- Deep learning enthusiast with hands-on experience in building a Skin Cancer Detection system using CNNs. Skilled in Python, TensorFlow/Keras, and OpenCV, with a solid understanding of medical imaging and classification. Trained a model on dermatoscopic images (ISIC dataset) to classify skin lesions as malignant or benign, achieving high accuracy through effective preprocessing, data augmentation, and model evaluation. Technologies Used: Python, Deep Learning (CNN), React.js, Node.js. • Key Features: Image Classification(Cancerous vs Non- cancerous). Libraries : NumPy, Pandas , Tensor Flow, OpenCV, Matplotlib.

Motion Detection | June 2024 - September 2024

- This project is on image processing using the OpenCV function. A computer vision system's basic goal is to detect moving things.

Full Stack Student Management System | February 2025 - March 2025

- Developed a web-based student management system to manage student records, course details, and academic information.
- Designed and implemented REST APIs for CRUD operations using backend technologies and MySQL database.
- Created responsive user interfaces for managing data using HTML, CSS, and JavaScript.
- Implemented database schema and optimized queries to ensure efficient data storage and retrieval.
