PROFILE SUMMARY

Experienced in full-stack development and integrating agentic solutions. Skilled in developing AI assistants, agentic workflows, backend systems, APIs, and problem-solving. Seeking a software developer role to apply technical and analytical skills in real-world projects.

WORK EXPERIENCE

Full Stack Developer, NTT Data

August 2025 – Present

- Part of the **Innovation Center** — contributed to design and development of next-generation AI-driven enterprise solutions.
- Architected and deployed an **AI-powered RFP automation platform** that streamlines the end-to-end proposal lifecycle, reducing manual effort and improving response efficiency.
- Designed a **LangGraph-based multi-agent architecture** enabling collaborative reasoning for requirement analysis, multilingual query understanding, intelligent document processing, content generation, and validation.
- Developed scalable backend services using **FastAPI and PostgreSQL**, ensuring efficient data handling and high-performance API responses and responsive frontend interface using **React.js**.
- Built an automated pipeline that transforms raw source code in any language into a formal Software Requirements Specification — extracting, clustering, and deduplicating system features using **graphifyy**, semantic analysis, PageRank scoring, and Leiden community detection.
- Developed AI copilots using Microsoft Copilot Studio to automate enterprise workflows and enable intelligent conversational assistance.

PROJECTS

PR Sentinel – AI

- Built an LLM-driven workflow engine using **LangGraph** to analyse live GitHub pull requests and generate automated review or escalation decisions.
- Integrated **MCP-based tool calling** to fetch real-time Jira issue status and send Slack notifications, enabling context-aware PR management across systems.
- Developed a full-stack application (**FastAPI, React, SQLite**) to store AI decisions and visualise PR health and escalation status on a dynamic dashboard.

AI Conversation Assistant

- Built a real-time voice assistant using **Groq Whisper (STT)** and **Gemma2-9b-it LLM** for intelligent, context-aware responses.
- Integrated **CrewAI agentic models** for task routing across RAG (Pinecone VDB + all-MiniLM-L6-v2 embeddings), web search via Google SerperAI, and direct LLM responses.

Job Scheduler Application

- Developed a full-stack job scheduling system supporting immediate execution, future scheduling, and recurring jobs (hourly, daily, weekly) with a clean **React + FastAPI** interface.
- Integrated **Apache Kafka** for asynchronous job execution messaging and result processing.
- Designed end-to-end workflow: file upload → scheduling → execution → result visualisation.

EDUCATION

Bachelor of Engineering, Computer Science

RV Institute of Technology and Management, Bengaluru

CGPA: 8.0 / 10

Dec 2021 – May 2025

TECHNICAL SKILLS

Programming Languages: JavaScript, Python, C++

AI & Agentic system : Prompt Engineering, LangChain, LangGraph, RAG, Embeddings & Vector DB, CrewAI, STT Models, OpenSource LLMs, Copilot Studio, Deepagents architecture

Web Technologies: React.js, FastAPI, Node.js, Express.js

Databases: PostgreSQL, MySQL, MongoDB, SQLite, VDB

Messaging & DevOps: Apache Kafka, Nginx, Cloudflare, Git
