SUMMARY

Full-stack engineer with 3+ years of experience building production-grade web applications, distributed backend systems, and AI-powered software across fast-paced startup environments.

Strong experience building modern applications using React, Next.js, Node.js, FastAPI, PostgreSQL, Redis, and TypeScript with a focus on scalable backend architecture, real-time systems, API design, and end-to-end product ownership.

Experienced shipping products from idea to production, working across frontend, backend, infrastructure, cloud deployments, and AI-assisted development workflows.

EXPERIENCE

Fluid – Jupiter (Juplend)

Nov 2025 – Present

Full Stack Engineer / Remote

- Built user-facing DeFi applications using Next.js, React, TypeScript, Rust, and Node.js.
- Developed real-time WebSocket/RPC pipelines powering live application state and protocol interactions.
- Built backend services for transaction orchestration, protocol integrations, and execution infrastructure.
- Optimized backend reliability, concurrency, and low-latency execution under production workloads.
- Worked extensively with Solana protocols including Drift, Marginfi, Kamino, and Save.

ComfyDeploy (YC-backed Startup)

Apr 2025 – Oct 2025

Founding Engineer / Remote

- Built full-stack platform features using React, Next.js, FastAPI, PostgreSQL, Redis, and TypeScript.
- Re-architected backend into scalable asynchronous infrastructure using Redis queues and event-driven execution.
- Built distributed execution pipelines integrating GPU infrastructure through Modal, Docker, and AWS.
- Designed real-time interfaces with WebSockets for execution monitoring and workflow management.
- Worked across frontend, backend, infrastructure, deployments, and production operations.

Spacez (\$20M+ Revenue Platform)

May 2024 – Mar 2025

Founding Engineer / Bangalore

- Built scalable customer-facing applications using React, Node.js, FastAPI, PostgreSQL, Redis, and AWS.
- Developed booking, payment, and operational workflows across multiple internal and external systems.
- Designed backend APIs, relational database schemas, and event-driven backend services.
- Improved PostgreSQL performance and backend reliability under production traffic.
- Owned architecture, deployments, scaling decisions, and engineering delivery end-to-end.

Superbio

Feb 2023 – May 2024

Backend Engineer / Remote

- Built backend APIs and services using FastAPI, PostgreSQL, Redis, and asynchronous processing systems.
- Designed REST APIs and background execution pipelines supporting production workloads.
- Managed Docker deployments, CI/CD pipelines, and production infrastructure.

PROJECTS

AI Research Copilot (LangGraph)

GitHub

- Built a production-style AI research assistant using React, FastAPI, LangGraph, and LLM APIs.
- Designed a multi-node workflow with planning, research, analysis, quality checks, and report generation using shared graph state and conditional routing.
- Implemented workflow progress tracking, session persistence, follow-up chat, and modular backend APIs.
- Documented architecture, engineering trade-offs, product roadmap, and production scalability considerations.

BlowupBot – Solana Token Launchpad

blowupbot.xyz

- Built a production launchpad using Rust, Anchor, Next.js, and Node.js.
- Designed transaction orchestration, event indexing, WebSocket updates, and backend execution systems.
- Implemented bonding curve pricing, token launch flows, and real-time user interactions.

Open Source – Rust Cargo

- Contributed a merged pull request to the Rust Cargo project after ramping up on an unfamiliar codebase and language.

SKILLS

Frontend: React, Next.js, Vue.js, Nuxt.js, TypeScript, JavaScript, HTML, CSS

Backend: Node.js, Express, FastAPI, REST APIs, WebSockets

AI: LangGraph, AI Workflow Design, LLM Integration, Agent Workflows, Prompt Engineering, AI-Assisted Development (Cursor, Claude Code)

Databases: PostgreSQL, Redis, MongoDB, ClickHouse

Infrastructure: AWS, Docker, Linux, CI/CD, Distributed Systems, Cloud Infrastructure

Systems: Event-Driven Architectures, Real-Time Systems, Concurrency, API Design, Backend Scalability

Languages: TypeScript, JavaScript, Python, Rust
